

Comprehensive Security for the SaaS Applications that Power Your Business

SaaS applications provide the tools employees need to succeed and hold the most critical information for your business. If those tools become unavailable or that data is jeopardized, there is a detrimental impact on your organization. Obsidian Security provides a centralized solution for managing risk, maintaining compliance, and investigating and mitigating threats across SaaS.

We've seen it all, so we solve for it all.

Firsthand data from the Obsidian platform, along with hundreds of IR engagements with our strategic partners like CrowdStrike, reveal a 10x increase in identified SaaS breaches year over year. Based on the wealth of techniques observed in these breaches, there are three key areas for SaaS security coverage:

SAAS GOVERNANCE

What SaaS applications and integrations exist in my environment?

INHERENT RISK

How are my SaaS applications configured, and what vulnerabilities exist?

RESIDUAL RISK

What are users and integrations doing, and are they behaving securely?

The Obsidian Multiplier Effect

Obsidian proudly offers a comprehensive platform that allows our customers to centrally manage the diversity and complexity of their SaaS ecosystems. Each core product pillar corresponds to a primary risk category, interacting and informing each other to create the industry's most robust and powerful SaaS defense solution.

Foundational Excellence: The Obsidian Knowledge Graph

Obsidian's Knowledge Graph enables rapid innovation that addresses SaaS security challenges as they emerge. We continuously build on this underlying unified data model to surface consolidated contextual insights from all activity within and across your SaaS environment so that you can protect business-critical data with ease and confidence.

Every app that matters to you matters to us.

Obsidian covers it all, from robust out-of-the-box support for leading SaaS platforms to our Obsidian App Kit, enabling you to extend visibility to any application uniquely critical to your environment.

Delivering Measurable Value in 90 Days

We are committed to solving the challenge of SaaS Security for our customers as efficiently and effectively as possible without burdening your already overloaded teams.

Connect

Implementation is easy. With just a few clicks and no professional services or software to deploy, you will be production-ready from day one.

Baseline

Our action system enables you to integrate insights into your workflow, act on them, and maintain a steady state.

Improve

Continuously prevent threats and enforce security standards by monitoring for baseline deviations.

Leading Fortune 1000 companies across all industries trust Obsidian to secure their data in SaaS applications.

"Obsidian was the obvious choice for us because of the depth in context and insights they provide across all critical areas of our SaaS ecosystem."

HAMMAD YACOOB
SaaS Security Lead

"Now, demonstrably, I can tell my executive team that we've made substantial improvements to our SaaS posture—and very quickly, too. Unless you have a solution like Obsidian, you can't do this in a measurable, meaningful way."

CALEB MAGEE
Chief Security Officer

"Obsidian promises always-on monitoring and protection and meets the compliance standards that our customers need to operate seamlessly."

ØYVIND BERGET
Chief Technical Officer

"Snowflake has hundreds of SaaS applications. To gain visibility into each of those could take months. With Obsidian, we were able to do that in days, if not hours."

MARIO DUARTE
VP of Security
